

Lucky Solanki

Backend & AI Engineer · 3+ years of experience

luckysolanki902@gmail.com [+91 90274 95997](tel:+919027495997) luckysolanki.com github.com/luckysolanki902 linkedin.com/in/luckysolanki902

I build the backend and the AI that works on top of it. Built Blitzit 3.0 from the backend up; co-founded MaddyCustom and coded its commerce platform. Ownership across architecture, agents, and daily operations.

Experience

Blitzit

Nov 2025 - Present · UK, remote

Core Backend Developer & AI Engineer

[Work story](#)

- **Built the entire Blitzit 3.0 backend from scratch:** Fastify/TypeScript domain modules, MongoDB models, and a typed event bus. Separated API and worker roles to move background processing off public requests.
- **Unified 12 providers behind one integration SDK and 70+ MCP tools.** Shared schemas, OAuth, permissions, and execution across in-app agents and external AI clients, with bidirectional sync, queued retries, and loop prevention.
- **Designed Blitzy's two-agent voice system:** realtime speech delegates to the existing reasoning agent and scoped tools, preserving one source of truth. Built interruption and audio coordination. Voice backend merged; frontend in review.
- **Made AI actions reversible:** a per-user change journal checks for conflicts before undo, protecting newer edits. Shared-list permissions enforce the same access boundaries for people and agents.
- **Trained the "Hey Blitzy" wake-word model in Colab** with on-device ONNX inference, candidate verification, microphone handoff, and an audio-reactive orb that makes listening, thinking, and acting visible.
- **Owned the platform beyond AI:** auth, recurrence, notifications, billing, realtime sync, and resumable legacy migration. Shared change-stream cursors and separate connections address database connection pressure.

MaddyCustom

Dec 2022 - Feb 2026

Co-founder & Lead Full-Stack Developer & AI Engineer

[Work story](#)

- **Coded the original commerce platform from scratch, not Shopify:** storefront, backend logic, and admin for a business reporting **100K+ monthly users** and **~\$62.4K USD annual revenue**.
- **Built an AI assistant that finds products and tracks orders:** OpenAI Agents SDK, catalogue tools, policy retrieval, and human handoff. Product cards, pagination, and conversation memory ground follow-ups in store data.
- **Designed checkout to handle gateway failures and repeat callbacks:** Razorpay/PayU fallback, payment verification, and guarded processing. Connected split orders, inventory, production files, and Shiprocket delivery in the admin.
- **Made customer drop-offs visible:** first-party funnel events, deduplication, UTM attribution, and repeat-buyer analysis. Owned Next.js/MongoDB operations tools, role-based access, caching, and database pooling.

Selected Projects & Freelance

Avana · Freelance, sole developer · 2025

Delivered an AI research product end to end: retrieval-augmented generation (RAG), WebRTC voice, Xendit subscriptions, and knowledge-base administration.

AutoRemov · Freelance, backend engineer · 2026

Built durable pg-boss image-processing workers, uploads, job recovery, credits, and payments. Migrated MySQL to PostgreSQL/Prisma with integration tests.

Spyll · Personal project · 2023 · Shipped a college social app to **1,700+ first-month downloads**, with verified access, anonymous posting, realtime chat, matching, and moderation.

Technical Skills

Backend TypeScript, Node.js, Fastify, Python, REST APIs, PostgreSQL, MongoDB, Redis, BullMQ, Prisma

AI & systems OpenAI Agents SDK, LLM tool calling, MCP, RAG, WebRTC, ONNX, OAuth 2.1, WebSockets

Product & delivery React, Next.js, Flutter, Docker, AWS S3/CloudFront, Vercel, integration testing

Education

Harcourt Butler Technical University

2021 - 2025

B.Tech, Mechanical Engineering · Web Dev Head, Technical Sub-Council
