SUMMARY

Backend and applied-AI engineer with 3+ years of experience taking products from an empty repository to production. Designed and built the entire Blitzit 3.0 backend, and as co-founder of MaddyCustom wrote the commerce platform behind a business with 100K+ monthly users. Focused on tool-calling agents, voice, third-party integrations, realtime sync, and payment systems that recover when things fail.

EXPERIENCE

Blitzit, AI-native task and focus app — Nov 2025 - Present
Core Backend Developer & AI Engineer — *Remote, UK*

- Architected and built the Blitzit 3.0 backend from the first commit: Fastify/TypeScript domain modules on MongoDB, Redis, and BullMQ, with a typed event bus and an API/worker split that keeps background jobs off user requests.
- Unified 12 third-party providers behind one integration SDK and exposed the product through 70+ MCP tools, so in-app agents and external AI clients share one set of schemas, OAuth, permissions, and execution, with bidirectional sync, queued retries, and sync-loop prevention.
- Designed a two-agent voice assistant in which a realtime speech model runs the conversation and delegates every action to the existing reasoning agent, giving voice and chat one source of truth for tools and permissions.
- Made AI actions safely undoable with a per-user change journal that checks for conflicts before reverting, so undoing an agent's change never overwrites a newer human edit.
- Owned auth, recurrence and timezone scheduling, notifications, Stripe and RevenueCat billing, WebSocket collaboration, and a resumable 2.0 to 3.0 migration; multiplexed MongoDB change streams to ease connection load.

MaddyCustom, D2C custom-merchandise brand — Dec 2022 - Feb 2026
Co-founder & Lead Engineer — *India*

- Built the commerce platform from scratch instead of using Shopify (storefront, backend, and operations admin) for a business with 100K+ monthly users and about ₹60L (~$62K) in annual revenue.
- Shipped an AI shopping assistant on the OpenAI Agents SDK that searches the catalogue, answers policy questions through retrieval, tracks orders, and hands off to a human, grounded in live store data.
- Engineered checkout to survive gateway failures with health-aware Razorpay/PayU failover, server-side payment verification, and guarded post-payment processing that withstands duplicate callbacks.
- Built the operations systems the team ran on: split orders, inventory, production files, Shiprocket fulfilment, role-based access, and first-party funnel analytics with UTM attribution and repeat-buyer reporting.

PROJECTS & FREELANCE

Avana, *Sole Engineer (Freelance)* — 2025
AI research assistant for Bali land investors: multi-agent orchestration, RAG, realtime WebRTC voice, and payments.

AutoRemov, *Backend Engineer (Freelance)* — 2026
Built durable pg-boss image-processing workers with job recovery and payments; migrated MySQL to PostgreSQL/Prisma.

Spyll, *Founder* — 2023
Verified anonymous college social network with realtime chat and moderation; 1,700+ downloads in its first month.

TECHNICAL SKILLS

Languages & backend: TypeScript, JavaScript, Python, Node.js, Fastify, PostgreSQL, MongoDB, Redis, BullMQ, Prisma

AI: OpenAI Agents SDK, LLM tool calling, Model Context Protocol (MCP), RAG, realtime voice (WebRTC)

Systems: OAuth 2.1, webhooks, WebSockets, background jobs, payments (Stripe, Razorpay, PayU, Xendit)

Frontend & cloud: React, Next.js, Flutter, Docker, AWS S3/CloudFront, Vercel, integration testing

EDUCATION

Harcourt Butler Technical University, Kanpur — 2021 - 2025
B.Tech, Mechanical Engineering · Web Development Head, Technical Sub-Council
