

Product-minded backend and AI infrastructure engineer with 3+ years of commercial software experience. I build agent systems, MCP tools, integrations, realtime sync, queues, and reliable backend platforms. At Blitzit, I own core backend and AI work for an AI-native task product; earlier, I co-founded products serving 100K+ monthly users.

01 - Experience

Core Backend Developer & AI Engineer *Blitzit* Nov 2025 — Present

AI-NATIVE TASK PLATFORM (UK, REMOTE) · FASTIFY · TYPESCRIPT · MONGODB · REDIS · BULLMQ · MCP SDK · ZOD

- Own core backend and AI systems in the Blitzit 3.0 rewrite — app traffic, Blitzy AI actions, MCP clients, provider webhooks, queues, schedulers, and sync workers share the same auth, Zod validation, ownership, and domain-event rules.
- Built a plugin-based integration SDK around a Node.js event bus and shared provider contracts, making integrations easier to add without spreading provider-specific logic across routes, workers, OAuth handlers, and sync code.
- Built a 54-tool MCP execution layer through OAuth 2.1 (PKCE) and JSON-RPC 2.0 over Streamable HTTP, exposing product actions safely to Blitzy and external LLM agents.
- Designed a Git-style undo/redo change journal: mutations from humans, AI, MCP tools, and API clients become reversible commits with content hashes — users can trust direct AI writes without losing newer manual changes.
- Shipped deep bidirectional sync with Asana, ClickUp, Notion, and Google Calendar — conflict resolution, webhook ingestion, timezone-aware scheduling — plus a BullMQ + Redis notification pipeline with retries and dead-letter queues.

Co-Founder & Lead Full-Stack Developer *Spyll* 2023 — Present

VERIFIED ANONYMOUS COLLEGE NETWORK · FASTIFY · MONGODB · SOCKET.IO · BULLMQ · FIREBASE · FLUTTER

- Built a campus social product with verified access, anonymous interaction, realtime chat, and random connect.
- Engineered the trust layer: verified access with peer-facing anonymity, rate limiting, moderation queues, blocking, reporting, and notifications that keep rooms safe without breaking anonymity.
- Rebuilding the mobile client in Flutter (from React + Capacitor) for native-grade smoothness; iterating on onboarding and matching flows against retention data.

Co-Founder & Lead Full-Stack Developer *MaddyCustom* Dec 2022 — Feb 2026

E-COMMERCE FOR VEHICLE CUSTOMIZATION · NEXT.JS · MONGODB · RAZORPAY · SHIPROCKET · META API · AWS · CLERK

- Co-founded and led full-stack product development across storefront, checkout, payments, shipping, operations, and admin systems for a custom-commerce product reaching 100K+ monthly users and ₹60L annual revenue.
- Built the admin operating system: inventory, order ops, production file downloads, offer engine, A/B testing, Sankey funnel analytics, customer journey views, review moderation, and role-based access.
- Implemented multi-gateway payment orchestration (Razorpay + PayU fallback), Shiprocket shipping, and server-side Meta tracking for a custom-commerce workflow.

02 - Selected Projects

- Avana FREELANCE · SOLE DEVELOPER · 2025 — AI investment research assistant for Bali real estate: orchestrator-style multi-agent chat (OpenAI Agents SDK), realtime WebRTC voice, document-backed answers over vector search, Xendit subscriptions, and an admin panel for documents, news scraping/approval, and knowledge ops. Two codebases shipped solo.
- AutoRemov FREELANCE · BACKEND ENGINEER · 2026 — Backend for an image background-removal product: presigned uploads, durable pg-boss job pipeline, credit and billing flows, Razorpay billing, MySQL→Postgres/Prisma migration, and integration tests around payments and processing.
- Dailicle FOUNDER · 2025 — Weekly deep-research publication: reading surface, archive, subscriber emails, audio support, and publishing workflow (Next.js, MongoDB, AWS S3, CloudFront).

03 - Skills

PRIMARY	TypeScript, Node.js, Fastify, MongoDB, PostgreSQL, Redis, BullMQ, Zod
AI / AGENTS	MCP Protocol, OpenAI Agents SDK, LLM orchestration, multi-agent handoffs, RAG, vector search, AI tool surfaces
DISTRIBUTED SYSTEMS	OAuth 2.1/PKCE, webhooks, queues, event-driven architecture, idempotency, REST, JSON-RPC, WebSockets, SSE, WebRTC, realtime sync
ALSO	React, Next.js, Flutter, Python, Docker, AWS (S3, CloudFront), Cloudflare, Prisma, Playwright, Razorpay, Xendit, admin tooling and analytics

04 - Education

Harcourt Butler Technical University (HBTU) · B.Tech, Mechanical Engineering · Web Dev Head, Technical Sub-Council 2021 — 2025
