Backend and applied-AI engineer who takes products from an empty repository to production. Designed and built the **entire Blitzit 3.0 backend**; as co-founder, wrote the **custom commerce platform behind MaddyCustom**. Strongest where product, infrastructure, and LLM agents meet: tool-calling agents, voice, integrations, realtime sync, and payments that recover when things fail.

100K+ monthly users | **12** providers, one SDK | **70+** MCP tools | **1,700+** first-month downloads

EXPERIENCE

Blitzit | Core Backend Developer & AI Engineer

Nov 2025 - Present

AI-native task and focus app · UK-based team, remote · Case study: luckysolanki.com/work/blitzit

- **Architected and built the Blitzit 3.0 backend from the first commit:** Fastify/TypeScript domain modules on MongoDB, Redis, and BullMQ, with a typed event bus and an API/worker split that keeps background jobs off user requests.
- **Unified 12 third-party providers behind one integration SDK** and exposed the product through **70+ MCP tools**. In-app agents and external AI clients share one set of schemas, OAuth, permissions, and execution, with bidirectional sync, queued retries, and sync-loop prevention.
- **Designed a two-agent voice assistant:** a realtime speech model runs the conversation and delegates every action to the existing reasoning agent, so voice and chat share one source of truth for tools and permissions.
- **Made every AI action safely undoable** with a per-user change journal that checks for conflicts before reverting, so undoing an agent's change never overwrites a newer human edit.
- **Trained a custom "Hey Blitzy" wake-word model** (openWakeWord, Colab) running on-device through ONNX/WASM, with candidate verification and a clean microphone handoff into the voice session.
- **Owned the platform end to end:** auth, recurrence and timezone scheduling, notifications, Stripe and RevenueCat billing, WebSocket collaboration, and a resumable per-user 2.0 to 3.0 migration. Multiplexed MongoDB change streams to relieve connection pressure.

MaddyCustom | Co-founder & Lead Engineer

Dec 2022 - Feb 2026

D2C custom-merchandise brand · Case study: luckysolanki.com/work/maddycustom

- **Built the commerce platform from scratch instead of using Shopify:** storefront, backend, and operations admin for a business with **100K+ monthly users** and **~$62K (₹60L) annual revenue**.
- **Shipped an AI shopping assistant** on the OpenAI Agents SDK that searches the catalogue, answers policy questions through retrieval, tracks orders, and hands off to a human, grounded in live store data.
- **Engineered checkout that survives gateway failures:** health-aware Razorpay/PayU failover, server-side payment verification, and guarded post-payment processing that withstands duplicate callbacks.
- **Built the operations backbone a small team ran on:** split orders, inventory, production files, Shiprocket fulfilment, role-based access, and first-party funnel analytics with UTM attribution and repeat-buyer reporting.

SELECTED PROJECTS & FREELANCE

Avana (Sole engineer, freelance · 2025) AI research assistant for Bali land investors: multi-agent orchestration, RAG over regulations, realtime WebRTC voice, and the full Xendit subscription lifecycle.

AutoRemov (Backend engineer, freelance · 2026) Built durable pg-boss image-processing workers with job recovery, uploads, credits, and payments; migrated MySQL to PostgreSQL/Prisma behind integration tests.

Spyll (Founder project · 2023) Verified anonymous social network for college students that reached **1,700+ downloads in its first month**: college-email verification, anonymous posting, realtime chat, matching, and moderation.

TECHNICAL SKILLS

Backend	TypeScript, Node.js, Fastify, Python, REST, PostgreSQL, MongoDB, Redis, BullMQ, Prisma
AI & agents	OpenAI Agents SDK, LLM tool calling, MCP, RAG, Realtime/WebRTC voice, ONNX
Systems	OAuth 2.1, webhooks, WebSockets, background jobs, payments (Stripe, Razorpay, Xendit)
Product & cloud	React, Next.js, Flutter, Docker, AWS S3/CloudFront, Vercel, integration testing

EDUCATION

Harcourt Butler Technical University, B.Tech, Mechanical Engineering — 2021 - 2025

Web Development Head, Technical Sub-Council
